I study Architectural Engineering at Heriot-Watt University. I wanted to study at GBS because I heard about it from a friend. Having studied Architectural Engineering for the past five years, I've been incredibly inspired and motivated by the sustainable practices in the built environment, considering how much of an important factor it is in tackling climate change.

It was an invaluable opportunity to learn specific techniques and technologies and expand my knowledge on sustainable developments from lecturers from all over the world, as well as meeting like-minded people and being able to collaborate in group settings.

We've learned an incredible number of different techniques for building in a sustainable environment from some incredibly cool lecturers, professors, architects and engineers from all walks of life.

They have offered a unique and insightful perspective into how they, and their companies, are tackling the climate crisis in the built environment.

To learn about how we can design buildings to be as energy-efficient as possible has been really insightful, as I've been very interested in the building services of design, looking at lighting, ventilation and heating. Learning about built environments and building services has definitely been my highlight.

I would recommend GBS to anybody who is thinking about it. The city is absolutely beautiful and the case studies that we've been learning about within the city and how they're tackling the climate crisis, has been incredibly insightful and I've loved every week of it.

**Green.
Building.
Solutions.**
