**Green.
Building.
Solutions.**

I just graduated from the University of Nottingham with a Master's in Architecture and Environmental Design.

The University of Nottingham have had a scholarship partnership with GBS for a while and I saw the opportunity come through and really wanted to apply.

During GBS, we looked at a Circular Economy, Alternative Energy Generation and Renewables, which all came together into a group project that combined all of those modules, which we presented at the closing ceremony.

What I've enjoyed most about GBS was meeting loads of new people from all around the world and getting their ideas and their thoughts on sustainability and how we're going to implement this into the future.

GBS is different because of all the different cultures that come together to have the important conversations that you would usually have in your own country and in your own university, but we're having them internationally. That's really a lot more interesting and there are a lot of different thoughts coming together, particularly in the group work, and it's been really interesting to see how we all interact.

I would recommend GBS to anyone who wants this kind of experience and an international perspective on sustainability and to learn all of these new ideas about Circular Economy and Energy Generation, as well as an international perspective on sustainability and architecture and how we're going to make the buildings of the future.
