**Green.
Building.
Solutions.**

My friend attended the Green.Building.Solutions. programme last year and she told me how amazing it was and very much recommended it. She said that it really helped her and her career, so I thought 'I want to gain the same experience that she has', and successfully applied for the course.

I really enjoyed GBS because it covered everything. It gives you a glimpse into all the different subjects, whether it's urban scale, architecture, building systems or building physics.

The excursions were great too and we went to places in Vienna that you would not see as a normal tourist.

I enjoyed experiencing the diversity of all the different people working together. You learn something from each person.

I would definitely recommend GBS because it gives you an insight of what it's like to really build sustainably.
